THOSTI

COMPANY

General Information

Since 1876 the name THOSTI is writing history in the construction business.

Since 2010, specialists and engineers with international orientation and experience work together under the name of THOSTI.

THOSTI GmbH and THOSTI International GmbH are mainly composed of engineers and specialists of the companies BS-Baugeräte-Service GmbH, Dywidag International GmbH and Krayem Co.

Both companies were specialized in design and manufacturing of steel structures and ordinary or special machinery for the construction industry. Another special field of THOSTI is the production of concrete elements with all necessary tests and approvals and the participation on the development and production of special parts for the production of concrete elements.

Our engineers and specialists have been involved in projects all over the world and have a large experience on their fields.

The aim of THOSTI is to gain trust of our clients and partners through quality work, high quality products and respectfully partnerships.

ENGINEERING

Planning / Production

We help our partners and customers with our know-how. Our spectrum ranges from the earliest stages of planning through handing over of complete plants.

Quality controls are in accordance with specified requirements, standards and specifications.

Through this targeted monitoring of all processes we are able to produce a high quality and effective product that can be left to the end user with the best conscience.

New construction / Reconstruction

For the construction of turnkey plants, we work together with renowned partners. The different components are designed professionally and the highest technical levels are achieved. All different components are joined together to a whole, forming an optimal working system.

The modification of existing production plants is designed according to the needs of our clients the existing conditions in its country.

Commissioning / Supervision

After the handing over of a turnkey factory or modification/modernisation of existing plants, we are along with Client's local staff that will take machines and equipment in operation.

Training and workshops on site will prepare the local workforce to daily production. Through the guidance of our staff, the quality for the future will be assured.

PRODUCTS

Machines / Constructions

We sell machines and equipment, which their basic concept has been proven for years. The machines have been developed in connection with the manufacturing process of each product. Customs special designs and inquiries can be adapted according to the local requirements. Speed, power and precision play a special role.

Poles / Pipes

Our engineers design and manage the whole concept of the production of spun concrete poles and concrete pipes. We optimize the concrete and provide, for each required product, the needed equipment and machinery.

THOSTI supports its customers and partners in the first stages of production and provides training of local staff, and effective production accompaniments, so the quality of the product can be improved step by step continuously.

Materials / Admixtures

The quality of the raw materials is crucial for final product. Defective materials caused costly downtime in the production chain. THOSTI effects tests on raw material and elaborate mixing designs for concrete.

Production halls

We supply individual system solutions that are tailored to the needs of our customers. Important for this, is to have the high quality and the flexible applications. Complete solutions are our strength.

Space frameworks

Space frames (or spatial structures) consist of linear elements, beams and columns, which are combined in different shapes and sizes to form the skeleton of a structure.

These systems are suitable for buildings with high flexibility in architecture. This opens up the possibility of open spaces with large spans make without supporting walls are used. This is very important for industrial buildings, shopping centers, parks, sports facilities, as well as for large office buildings.

The application of space structures allows a column-free surge of very large rooms and a higher capacity with lower weight steel. Costs can be saved by it. We advise our customers and offer complete solutions for its planned project.

THOSTI**Sleepers / ties technology**

Since 1949, the former THOSTI Bauaktiengesellschaft has specialized in the manufacture of pre-stressed concrete sleepers. Together with the Swiss company "Bureau Ltd BBRV." - which was primarily engaged in the consultancy, research and development in the area of stressing - was then developed the THOSTI BBRV-tensioning system.

Today we are able to design any type of sleepers with different stressing systems (THOSTI, Wayss & Freytag, DYWIDAG, Longline).

THOSTI offers complete solutions, from consulting and technical monitoring until delivery of turnkey plants.

Mounting parts / Spare parts

All products, materials and components, which are used or sold by us pass through trials and meet the required German Standards, or, if required, the national Standards or our Client's country.

Joint Ventures - professional production

THOSTI is familiar with management of international business for years.

Partnerships are sometimes faster and better solutions for the Client as well for THOSTI. Our company is therefore interested to form joint ventures in several countries in which the offered products will be manufactured.
